

Create a open AI account for API billing at: <https://platform.openai.com/api-keys>

Create an account for the amazon and ebay at: <https://www.sellbrite.com/pricing-pro/>

Two Week plan:

- ☐ First see how the AI does with analyzing and giving me information about images.
- ☐ Write a script that will output to sellbright for bulk item importing.
- ☐ See how the AI model does with images and give me information.
- ☐ Train the open AI model with the images on the omeka S3 bucket to get it to work well with the bottles and items.
- ☐ Work on the website portion and get it back on my hosting and off bluehost. Keep omeka on bluehost for now until I figure out a solution to the SQL crashes on lightsail.
- ☐ Get omekas URL fixed and fix any issues/questions staff may have about the system.
- ☐ Start creating the new cannabis museum website and implement the store feature into it.
- ☐ Start doing research on the omeka module for online item sorting.
- ☐ Start doing research on the omeka module for the QR codes.
